

# IRONWORKS<sup>®</sup>

EDDHA Chelated Iron Suspension Concentrate (SC)

## Guaranteed Analysis

Iron (Fe) .....1.8%  
1.8% Chelated Iron (Fe)

*Derived from Iron EDDHA*

**CAUTION:** Keep Out of Reach of Children

**Mixing Procedures:** Mix 1 gallon of **IronWorks** Suspension Concentrate (SC) with water and apply at 6 to 12 gallons of mixture per acre. Higher water volumes may be added to increase application rate of diluted mixture. Agitation is recommended during mixing and application.

**Recommendations for Use:** In-furrow applications of **IRONWORKS SC** at a rate of 1.0 gallon /A has shown to be the most effective and beneficial application type to alleviate iron deficiency symptoms. Dilute with water and apply mixture at volumes of 6 to 12 gallons per acre. Various environmental factors will increase or decrease the results of this product. Follow good agronomic practices, soil test, use tissue analysis, and consult with a competent agronomist for best results.

**Note:** One (1) gallon contains the equivalent of 3 pounds of water soluble Iron EDDHA powder (6% Fe).

**General Directions for Foliar Application:** Prior to or at the onset of deficiency symptoms apply 0.5 gallons of **SC** / A using spray carrier (water) volumes of 10 to 20 gallons per acre (ground application) or 5 gallons per acre (air) for best results. For severe deficiency symptoms it may require repeated applications of 0.5 gallons / Acre applied 2 or more weeks after the initial application.

**Conditions of Sale:** Seller warrants that this product conforms to the chemical description on the label and is reasonably fit for the purpose described when used in accordance with directions for use. The warranty of this product does not extend to use contrary to the label instruction, abnormal conditions, or conditions not reasonably foreseeable to seller. Buyer assumes the risk of any such use.
